## EXPERIENCE

### **TransitPros, Kansas City — Senior Engineer/Cloud Engineer**

December 2021 - Current

Part of company transition to bring engineering in-house from a 3rd-party provider. Began a development architecture in our flagship PHP site/product. Personally responsible for migrating from a static web server with no deployment process to a Dockerized app on an AWS Kubernetes cluster with full CI/CD support. Also personally designed and implemented API integrations with our main business client Copart.

### **UGA Finance, Kansas City — System Engineer**

September 2018 - May 2020

Worked with a small team of developers to build and maintain company applications. Going from a monolithic flagship application to one designed as many microservices to one designed as several interlocking APIs. I personally built out new payment code, new error reporting code, new email code, and created many APIs within our application architecture.

### **UGA Finance, Kansas City — IT Intern**

September 2017 - September 2018

Responsible for development of various ancillary projects such as a PHP based documentation framework for clients using our APIs, and internal reporting software, as well as a stand-alone Spring application with the purpose of continuously replicating data from Salesforce to a local SQL backup.

### **Cerner Corporation, Kansas City — IT Intern**

January 2017 - August 2017

Designed and implemented an application-launching macro tool built with AutoHotkey as well a monitoring application custom built in C# to show the status and control the function of multiple instances of the AutoHotkey service on many devices on the same network. These tools were built for hospitals or other health facilities to centralize and track displays of health and patient data.

## EDUCATION

### **Staley High School, Kansas City — High School Diploma**

2014 - 2018

### **Northland CAPS, Kansas City — Internship**

2016 - 2018
